SUMMARY

Computer Science undergraduate with hands-on experience building AI-powered and full-stack applications using Python, FastAPI, React, and machine learning. Experienced in developing REST APIs, integrating LLM APIs, prompt engineering, and building practical AI solutions using structured and unstructured data. Passionate about Generative AI, large language models, and backend engineering, with a strong foundation in ML fundamentals and rapid learning. Seeking an AI/ML Internship to contribute to GenAI applications involving LLMs, RAG, and scalable AI systems.

EXPERIENCE

Growth & Marketing

Trinkerr

December 2023 - May 2025, Bengaluru, India

- Authored and published insightful articles, enhancing audience engagement and brand visibility.
- Collaborated on a Java-based project, demonstrating technical proficiency and problem-solving skills.
- Analyzed datasets in Excel for short-term trends, delivering actionable insights to support business decisions.
- Acquired hands-on training in Python, applying it to quantitative finance concepts to drive data-driven strategies.

PROJECT

Onetap – Web Superapp

- React.js, Context API, Firebase, REST APIs, Vercel
- Built a responsive multi-module web app integrating real-time weather, news, and e-commerce functionalities.
- Managed global application state using useReducer and Context API; integrated Firebase for backend authentication and database management.

API Optimization & Microservices Backend

- Python, FastAPI, REST APIs
- Designed RESTful backend services using FastAPI with modular endpoints, CORS integration, and API optimization techniques.
- Built scalable service architecture for product retrieval, recommendations, and request handling using third-party APIs.

AI Document Assistant

- Python, FastAPI, OpenAI API, RAG
- Built a document question-answering assistant using OpenAI APIs and Retrieval-Augmented Generation (RAG).
- Processed structured and unstructured documents to generate context-aware responses.

Credit Card Fraud Detection using Machine Learning

- Python, Scikit-learn, Pandas, NumPy, Matplotlib
- Developed a machine learning model to detect fraudulent credit card transactions using a real-world imbalanced dataset.
- Implemented Decision Tree, Random Forest, KNN, and K-Means algorithms with data preprocessing, feature scaling, and performance evaluation using Precision, Recall, and F1-score.

SKILLS

Languages & Frameworks: Python, FastAPI/Flask, Java, C, React.js

AI/ML & LLM Tools: Prompt Engineering, LLM APIs (OpenAI/Claude), RAG Fundamentals, Deep Learning, Pandas, NumPy, Matplotlib

Web & Databases: React Context API, Firebase (Auth/Firestore), REST APIs, SQL, Apache Cassandra

Developer Tools & Version Control: Git, Linux Shell Scripting, Vercel, Canva

EDUCATION

Bachelor of Information Science and Engineering

JAIN University • Bengaluru, India • 2023-2027 • 8.21 CGPA.
